

Explain in your own words the difference between encapsulation and abstraction, using examples from any social media app you use daily (like Instagram or WhatsApp).

Encapsulation	Abstraction
It protects the data.	It hides the complex implementation.
It controls access to data.	It shows only the necessary features.
It is achieved using private, public, getters and setters.	It is achieved using abstract classes and abstract methods.
Example: Hiding an Instagram user's password.	Example: Using Instagram's Like button without knowing its internal working.
