

Write a SQL query to display the names of restaurants from a 'restaurants' table that have received an average rating above 4.0, using GROUP BY and HAVING.

The screenshot shows the MySQL Workbench interface. The left sidebar displays the 'SCHEMAS' tree with 'instadone' selected. The main editor shows a SQL query in the '2_question' tab. The query is as follows:

```
1 • SELECT
2   name,
3   AVG(rating) AS average_rating
4 FROM
5   restaurants
6 GROUP BY
7   name
8 HAVING
9   AVG(rating) > 4.0;
10
11 • DESCRIBE restaurants;
```

Below the query editor, the 'Result Grid' is displayed, showing the schema of the 'restaurants' table:

Field	Type	Null	Key	Default	Extra
id	int(11)	NO	PRI	NULL	auto_increment
name	varchar(100)	YES		NULL	
cuisine	varchar(50)	YES		NULL	
rating	decimal(2,1)	YES		NULL	
city	varchar(50)	YES		NULL	

The bottom status bar indicates 'Result 2 x' and 'Read On'.
