

Suppose you have a 'payments' table with columns user_id, amount, and payment_date. Write a subquery to find user_ids who have made a single payment above ₹2000 in any transaction.

The screenshot shows the MySQL Workbench interface. The left sidebar displays the 'SCHEMAS' tree with 'instadone' selected. The main editor shows a SQL query with a subquery. The query is as follows:

```
13 (104, 1800.00, '2026-08-12'),
14 (105, 4500.00, '2026-08-15');
15
16 • SELECT DISTINCT user_id
17 • FROM (
18 •     SELECT user_id, amount
19 •     FROM payments
20 •     WHERE amount > 2000
21 • ) AS high_value_payments;
22
23 • SHOW TABLES;
```

The 'Result Grid' at the bottom shows the output of the query, which includes a list of tables in the 'instadone' database:
