

❖ **Write a short comparison (3-4 lines each) of MySQL, PostgreSQL, Oracle, and SQLite, focusing on where each one is commonly used (for example: web apps, mobile apps, enterprise systems, etc.).**

➤ **MySQL**

1. MySQL is commonly used for **web applications and websites**.
2. It is popular with PHP, Python, and other web technologies.
3. It is easy to use and suitable for small to large applications.

➤ **PostgreSQL**

1. PostgreSQL is used for **web apps, data-heavy applications, and analytics**.
2. It provides advanced database features and strong data integrity.
3. It is popular in modern backend and enterprise applications.

➤ **Oracle**

1. Oracle is mainly used in **large enterprise systems**.
2. It is commonly used by banks, governments, and large companies.
3. It is powerful for handling large amounts of critical data.

➤ **SQLite**

1. SQLite is commonly used in **mobile apps, desktop apps, and small applications**.
2. It is lightweight and does not require a separate database server.
3. It is widely used in Android, iOS, and embedded applications.
