

Session : 2

❖ **Install GCC on your computer and verify the installation by running `gcc --version` in your terminal or command prompt.**

- ✓ Install gcc from SourceForge
- ✓ PS C:\WINDOWS\system32> gcc --version
- ✓ gcc.exe (MinGW.org GCC-6.3.0-1) 6.3.0

❖ **Open VS Code or DevC++ and create a new file named `hello.c`. Write a C program that prints 'Hello, Instagram World!' to the console.**

```
#include<stdio.h>
```

```
int main()  
{  
    printf("Hello, Instagram World!");  
  
    return 0;  
}
```

❖ Compile your hello.c file using the GCC command line (gcc hello.c -o hello) and run the output file to display the message in your terminal.

Hint: On Windows, the output file will be hello.exe; on Linux/Mac, it will be hello.

1.Compile:-

```
</>bash – gcc hello.c -o hello
```

2.Run Windows (MinGW/Git Bash):-

```
</>bash – ./hello
```

hello.exe

3. Output:-

```
</>bash – Hello, Instagram World!
```
