

Create a table called Playlist with columns: id, song\_name, artist, genre, and play\_count. Insert at least 5 sample records representing your favorite songs from Spotify.

The screenshot shows the MySQL Workbench interface. The left sidebar displays the 'SCHEMAS' tree with a database named 'instacalone' selected. The main editor window contains the following SQL code:

```
8 -- ;;
9
10 * INSERT INTO Playlist (song_name, artist, genre, play_count)
11 VALUES
12 ('Blinding Lights', 'The Weeknd', 'Pop', 120),
13 ('Shape of You', 'Ed Sheeran', 'Pop', 150),
14 ('Believer', 'Imagine Dragons', 'Rock', 100),
15 ('Perfect', 'Ed Sheeran', 'Romantic', 90),
16 ('Heat Waves', 'Glass Animals', 'Indie Pop', 110);
17
18 * SELECT * FROM Playlist;
```

Below the code editor, the 'Result Grid' shows the output of the SQL execution. It contains 7 rows of data:

|   | id | song_name       | artist          | genre     | play_count |
|---|----|-----------------|-----------------|-----------|------------|
| ▶ | 1  | Blinding Lights | The Weeknd      | Pop       | 120        |
|   | 2  | Shape of You    | Ed Sheeran      | Pop       | 150        |
|   | 3  | Believer        | Imagine Dragons | Rock      | 100        |
|   | 4  | Perfect         | Ed Sheeran      | Romantic  | 90         |
|   | 5  | Heat Waves      | Glass Animals   | Indie Pop | 110        |
|   | 6  | Blinding Lights | The Weeknd      | Pop       | 120        |
|   | 7  | Shape of You    | Ed Sheeran      | Pop       | 150        |

The 'Output' pane at the bottom shows the execution log with the following entries:

- 8 11:09:14 USE instacalone 0 row(s) affected
