

Write a SELECT query to display only the song_name and artist from the Playlist table, but show the artist column as 'Singer' using an alias.

The screenshot shows a database query editor interface. The query editor at the top contains the following SQL query:

```
1 • USE instac1one;  
2 • SELECT song_name, artist AS Singer  
3   FROM Playlist;
```

Below the query editor, the 'Result Grid' is displayed, showing the results of the query. The grid has two columns: 'song_name' and 'Singer'. The first row shows 'Blinding Lights' by 'The Weeknd'. The second row shows 'Shape of You' by 'Ed Sheeran'. The third row shows 'Believer' by 'Imagine Dragons'. The fourth row shows 'Perfect' by 'Ed Sheeran'. The fifth row shows 'Heat Waves' by 'Glass Animals'. The sixth row shows 'Blinding Lights' by 'The Weeknd'. The seventh row shows 'Shape of You' by 'Ed Sheeran'.

song_name	Singer
Blinding Lights	The Weeknd
Shape of You	Ed Sheeran
Believer	Imagine Dragons
Perfect	Ed Sheeran
Heat Waves	Glass Animals
Blinding Lights	The Weeknd
Shape of You	Ed Sheeran

The interface also includes a 'Filter Rows' section, an 'Export' button, and a 'Wrap Cell Contents' button. The bottom right corner shows a 'Read Only' status.
