

Use the **COUNT** aggregate function to find out how many songs in your **Playlist** table belong to the genre 'Hip-Hop'.

The screenshot shows a SQL query editor with a toolbar at the top containing icons for file operations, execution, and settings. The query is as follows:

```
1 • use instacionej
2 • SELECT COUNT(*) AS total_songs
3 • FROM Playlist
4 • WHERE genre = 'Hip-Hop';
```

Below the query editor, the 'Result Grid' is visible, showing a single row with the column 'total_songs' and the value '0'. The interface also includes a 'Filter Rows' section, an 'Export' button, and a 'Wrap Cell Content' checkbox.

total_songs
