

Write a SELECT query that shows the total number of plays (SUM of play_count) for each genre in your Playlist table, grouped by genre.

Hint: Use GROUP BY with the SUM function to aggregate play counts by genre.

The screenshot shows a database management interface with a menu bar (File, Edit, View, Query, Database, Server, Tools, Scripting, Help) and a toolbar. The left sidebar displays a 'SCHEMAS' tree with folders for 'emp', 'instacione', 'phpmyadmin', 'study', 'test', and 'tops'. The 'instacione' folder is expanded, showing 'Tables', 'Views', 'Stored Procedures', and 'Functions'. The main query editor contains the following SQL code:

```
1 • USE instacione;
2 • SELECT genre, SUM(play_count) AS total_plays
3 • FROM Playlist
4 • GROUP BY genre;
```

Below the query editor, the 'Result Grid' tab is active, displaying the query results in a table:

genre	total_plays
Indie Pop	440
Pop	1080
Rock	400
Romantic	360

At the bottom left, the 'Administration' tab is selected, and the 'Schemas' sub-tab is active, showing 'No object selected'.
