

Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

The screenshot shows the MySQL Workbench interface. On the left, the 'SCHEMAS' sidebar displays a database named 'instadone' with several tables including 'influencers', 'posts', 'restaurants', and 'users'. The main query editor contains the following SQL code:

```
1 SELECT
2     posts.caption,
3     influencers.name AS influencer_name
4 FROM
5     posts
6 INNER JOIN
7     influencers ON posts.influencer_id = influencers.influencer_id;
```

Below the query editor, the 'Result Grid' shows the output of the query. It has two columns: 'caption' and 'influencer_name'. The results are as follows:

caption	influencer_name
