

Use a SELECT query with WHERE and LIMIT to fetch the top 2 restaurants in the city 'Ahmedabad' with a rating above 4.0 from the Restaurants table.

Hint: Combine WHERE for city and rating, and LIMIT to restrict the number of results.

The screenshot shows the MySQL Workbench interface. The left sidebar displays the 'SCHEMAS' tree with 'instancione' expanded, showing tables like 'restaurants'. The main editor window contains a SQL query:

```
1 SELECT *
2 FROM Restaurants
3 WHERE city = 'Ahmedabad'
4 AND rating > 4.0;
5
```

Below the query editor, the 'Result Grid' shows the results of the query:

id	name	cuisine	rating	city
1	Spice Garden	Indian	4.5	Ahmedabad

The bottom panel shows the 'Action Output' and 'Message' logs. The logs indicate that the query was executed successfully, returning 1 row(s).
