

Create a stored procedure named `GetMonthlyPlaylistCount` that takes a `user_id` and a month (as an integer) as input, and returns the total number of playlists the user created in that month.
Hint: Use the `MONTH()` function in your `WHERE` clause.

The screenshot shows the MySQL Workbench interface. On the left, the 'SCHEMAS' navigator displays a tree view of the database structure, including tables like 'cart', 'expenses', 'foodorder', 'influencers', 'movies', 'orderitems', 'orders', 'payments', 'pl', 'playlist', 'playlists', 'posts', 'products', and 'restaurant'. The 'playlists' table is selected, showing its columns: 'playlist_id', 'user_id', 'name', and 'created_at'. The main editor window shows a SQL script for creating a stored procedure named 'GetMonthlyPlaylistCount'. The script is as follows:

```
8 )
9 BEGIN
10     SELECT COUNT(*) AS total_playlists
11     FROM playlists
12     WHERE user_id = p_user_id
13         AND MONTH(created_at) = p_month;
14 END$$
15
16 DELIMITER ;
17
18
```

Below the script, the 'Result Grid' shows the output of the query. It has two columns: 'total_playlists' and a single row with the value '1'.

total_playlists
1
