

Create a new table called 'playlists' for a music app like Spotify, with columns: playlist_id (INT, primary key, auto-increment), title (VARCHAR(50)), created_by (VARCHAR(50)), and created_at (DATE).

The screenshot shows the MySQL Workbench interface. The left sidebar displays the 'SCHEMAS' tree with a list of databases including 'emp', 'instacore', 'posts', 'users', 'Views', 'Stored Procedures', 'Functions', 'phpmyadmin', 'study', 'test', and 'tops'. The 'instacore' database is selected. The main editor window shows a SQL script for creating a table named 'playlists' with the following columns: 'playlist_id' (INT, PRIMARY KEY, AUTO_INCREMENT), 'title' (VARCHAR(50)), 'created_by' (VARCHAR(50)), and 'created_at' (DATE). The script includes a 'use instacore;' statement and a 'select * from playlists;' statement. The 'Result Grid' at the bottom shows the execution results of the script, with columns for 'Time', 'Action', and 'Message'. The results indicate that the table was created successfully and the 'select' statement returned 0 rows.

```
1 • use instacore;
2
3 -- CREATE TABLE playlists (
4 --   playlist_id INT PRIMARY KEY AUTO_INCREMENT,
5 --   title VARCHAR(50),
6 --   created_by VARCHAR(50),
7 --   created_at DATE
8 -- );
9
10 • select * from playlists;
```

playlist_id	title	created_by	created_at
-------------	-------	------------	------------

#	Time	Action	Message
11	13:56:42	use instacore	0 row(s) affected
12	13:56:42	CREATE TABLE playlists (playlist_id INT PRIMARY KEY AUTO_INCREMENT, title VARCHAR(50), cr...	0 row(s) affected
13	13:57:18	use instacore	0 row(s) affected
14	13:57:18	CREATE TABLE pl--aylists (- playlist_id INT PRIMARY KEY AUTO_INCREMENT, - title VARCHAR(50)...	0 row(s) affected Records: 0 Duplicates: 0 Warnings: 0
15	13:57:34	use instacore	0 row(s) affected
16	13:57:34	select * from playlists LIMIT 0, 1000	0 row(s) returned
